

Fan Board

Fan, backpanel, and mechanical support for an EDT main board

Description

The Fan board is a mezzanine board that provides a cooling fan, backpanel, and mechanical (bracing) support for an EDT main board (PCI SS, PCI GS, or PCIe8 LX / FX / SX).

The board can be used when the main board is being used alone – for example, as an FPGA accelerator – and no other mezzanine board is needed for specific I/O and functionality.

Applications

Any application which needs cooling or mechanical (bracing) support for a standalone EDT main board

Features

Auxiliary board to cool and brace an EDT main board

Works with a PCI SS, PCI GS, or PCIe8 LX / FX / SX

Provides a cooling fan, backpanel, and mechanical support
